

*"Aston aims to enable the employer and individual to access choice and opportunity through education, guidance and support"*

## Manufacturing processes apprenticeships

This apprenticeship deals with the UK manufacturing industry, which is among one of the most forward-thinking industries in the areas of recycling, energy conservation and the environment.

As an intermediate level apprentice

- Operate equipment
- Testing and sampling
- Packaging
- Finishing operations

The advanced apprenticeship has 2 routes of specialisation:

- Process engineering - operating more complex machinery and improving workflow
- Process operations - leading a specific part of the process, possibly in the role of a team leader.

You might also learn some engineering skills and carry out maintenance on machines, or learn how to effectively respond to any problems that may come up - and keep production processes going.
